**DETAILED ACTION**

Claims 2-4, 6-18, 20, 21, 29-33, 40-52, 59, 62 are pending in the case.

Claims 48-51 are withdrawn.

***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/30/08 has been entered.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 2-4, 6-18, 29-33, 40-47, 52, 59 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

To provide evidence of possession of a claimed genus, the specification must provide sufficient distinguishing identifying characteristics of the genus. The factors to be considered include disclosure of complete or partial structure, physical and/or chemical properties, functional characteristics, structure/function correlation, methods of making the claimed product, or any combination thereof. In this case, claims are directed to a method of accelerating nutrient uptake in bacteria or yeast without a substantially commensurate increase of biomass comprising contacting an aerobic yeast fermentation supernatant and a surface-active agent, wherein the aerobic yeast fermentation supernatant is obtained by "heating" a plurality of yeast cells after fermentation. While the specification has adequate written description of obtaining the yeast aerobic fermentation supernatant that will function in the claimed method, using particular heating conditions, i.e. particular temperature range set forth in claim 20, there is no disclosure of the entire genus claimed, i.e. any "heating" condition, which will provide the supernatant that will function in the claimed manner. One skilled in the art would conclude that the disclosure of particular temperatures which yield a supernatant that functions in the claimed manner, is not representative of the undefined genus of any heating conditions as recited in the claims. Accordingly, in the absence of sufficient recitation of distinguishing identifying characteristics, the specification does not provide adequate written description of the claimed genus.

### ***Conclusion***

Claims 20, 21, and 62 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
